## CERIIFCATE OF ANALYSIS

## EheI (NarI*)

## \#ERO441 500 u

## Lot <br> Expiry Date:

| ${ }^{2} \ldots \mathbf{G}$ | $\mathbf{G}$ | $\mathbf{C}$ |
| :--- | :--- | :--- | :--- | :--- |
| $3^{\prime} \ldots \mathbf{G}$ | $\mathbf{C}$ | $\mathbf{C} \ldots$ |
| $\mathbf{G} \uparrow \mathbf{C}$ | $\mathbf{G}$ | $\mathbf{G} \ldots$ |

*日hel - neoschizomer of Narl, completely oigests lambda and pBR322 DNAs and produces fragments that have blunt ends.

Concentration:
Source:
Supplied with:
Storeat-20ㅇ

10 up
Exwinia herbicola 9/5
1 m of 10X Buffer Tango

## RECOMMENDATIONS

1X BufferTango" (for 100\% 日hel digestion)
33 mM Tris-acetate (pH 7.9), 10 mM magnesium acetate, 66 mM potassiumacetate, $0.1 \mathrm{mg} / \mathrm{ml}$ BSA

## Inculation temperahure

$37^{\circ} \mathrm{C}$

## Unit Definition

One unit is defined as the amount of Bnel required to digest $1 \mu \mathrm{~g}$ of lambda DNA-Pstl fragments in 1 hour at $37^{\circ} \mathrm{C}$ in $50 \mu$ of recommended reaction buffer.

## Dilution

Dilute with Dilution Buffer (\#B19): 10 mM Tris-HC (pH 7.4 at $25^{\circ} \mathrm{C}$ ), $100 \mathrm{mM} \mathrm{Ka}, 1 \mathrm{mM}$ EDTA, $1 \mathrm{mM} \mathrm{DTT}$, 0.2 mg/m BSA and 50\% glycerol.

## Doulde Digests

Tango ${ }^{\text {m" }}$ Buffer is provided to simplify buffer selectionfor doubledigests. 98\% of Fermentas restridion enzyres are adiveina 1 Xor $2 \times$ concentration of Tango Buffer. Please refer to the Fermentas Catalog or go to wuw.fementas.con/doubledigest to choose the best buffer for your experiments.

## Storage Buffer

Ene is supplied in: 10 mM Tris-Hd (pH 7.5 at $25^{\circ} \mathrm{C}$ ), 100 mM Nad, 1 mM DTT, 0.1 mM EDTA $0.2 \mathrm{mg} / \mathrm{md}$ BSA and $50 \%$ glycerd.

## Recommended Protocol for Digestion

- Add:

| nudease-free water | $16 \mu$ |
| :--- | :---: |
| 10XBuffer Tango | $2 \mu$ |
| DNA (0.5-1 $\mu g \mu)$ | $1 \mu$ |
| 日he | $0.5-2 \mu^{\prime *}$ |

- Mix gently and spin down for a few seconds.
- Inculbate at $37^{\circ} \mathrm{C}$ for 1-16 hours**.

The digestion reaction may be scaled either up or down.
Recommended Protocol for Digestion of PCR Products
Directly after Amplification

- Add:

| PCR reaction mixture | $10 \mu(\sim 0.1-0.5 \mu$ of DNA) |
| :--- | :---: |
| nudease free water | $18 \mu^{\prime \prime}$ |
| 10XBuffer Tango | $2 \mu^{\prime \prime}$ |
| 日hel | $1-2 \mu^{* * *}$ |

- Mix gently and spin down for a few seconds.
- Inculbate at $37^{\circ} \mathrm{C}$ for 1-16 hours**.
** See Note

## Thermal Inactivation

Ened is inactivated by incubation at $65^{\circ} \mathrm{C}$ for 20 min

## ENEYME PROPERIIES

EnrymeActivity in Fermentas REase Buffers, \%

| $\mathbf{B}$ | $\mathbf{G}$ | $\mathbf{O}$ | $\mathbf{R}$ | Tango'" $^{\text {m }}$ | 2XTango'" |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $20-50$ | $50-100$ | $0-20$ | $0-20$ | 100 | $20-50$ |

## Methylation Effects on Digestion

Dam never ovelaps - no effect
Dam may overlap - no effect.
GpG completely overlaps - blocked.
Ecok: never overlaps - no effect
EcoBl: never overlaps - no effect

## Stalbility churing Prolonged Incubation

A minimumof 1.0 unit of the enzyme is required for complete digestion of $1 \mu \mathrm{~g}$ of lambda DNA in 16 hours at $37^{\circ} \mathrm{C}$

## Digestion of Agarose-embeckled DNA

A minimum of 20 units of the enzyme is required for complete digestion of $1 \mathrm{\mu g}$ of agarose-enbedded lambda DNA in 16 hours.

Number of Recognition Sites in DNA

| $\lambda$ | $\Phi \times 174$ | pBR322 | pUCS7 | pUC18/19 | pIZ19R/U MH3mp18/19 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2 | 4 | 1 | 1 | 0 | 1 |

## Note

A large excess of Bne ( $10 \mathrm{u} / \mathrm{hg}$ DNA $\times 16$ hours) may result in star adivity.

## QUATY CONIROLASSAY DATA

## Overdigestion Assay

No detectable change in the specific fragmentation pattem is obsened after a 80 -fold overdigestion with Ehel ( $5 \mathrm{u} / \mathrm{ug}$ lambda DNA $\times 16$ hours).

## Ligetion/Recutting Assay

After a 50-fold overdigestion ( $3 / \mu \mathrm{g}$ DNA $\times 17$ hours) with
Enel, more than $80 \%$ of the digested pBR322 DNA fragments can be ligated in a reaction mixure containing $20-40$ u of T4 DNA ligase $11 \mu$ of fragments and 10\%PEG at a 5 '-temini concentration of $0.35 \mu \mathrm{M}$. More than $90 \%$ of these sites can be reat

## Labeled Oligonucleotide (LO) Assay

No detectable degradation of single stranded or doublestranded labeled digonucledides occurred during incubation with 10 units of Bne for 4 hours.

Quality authorized by: $\mathscr{L}, \longrightarrow$ Laima Sambliene

## PRODUCT USE LIMTATION

This product is developed, designed and sold exdusively for research purposes and in vitro use only. The product wes not tested for use in diagnostics or for dung developmet, nor is it suitable for adrinistration to humens or animals. Please refer to unw.fermentas.comfor Material Safety Data Sheet of the product
